228 Saint Paul Street, Westfield, NJ 07090

Ever wanted to get your teeth straightened but were afraid it might hurt or cost too much?

Our office offers Invisalign® – the exciting way to straighten your teeth without braces

- Invisalign® is an exciting technology that straightens your teeth with a series of clear, customized, removable aligners. The aligner is a thin piece of medical grade plastic that fits over the teeth like a glove would fit on a hand. Hardly anyone can tell you're going through treatment and because the aligners are removable, you can eat whatever you want during treatment.

- To learn more, we have a video posted on our website - www.paularfanisdds.com - that has some patient testimonials and explains more about this exciting technology. It takes just a few minutes - feel free to share with your family, friends and co-workers.

- We also want to make sure you know that our office

can work with you to find financing options that work with most budgets. We'll also sending you some information on a new "18 Month No Interest" program available through CareCredit®. Ask for details on this program at the front desk.

- To see if Invisalign is right for you (it can work for teens and adults), call us at 908-232-0074 to schedule a consultation.

Thank you for your commitment to our practice. We hope you, another family member or a friend can benefit from this exciting news.

• **COMPREHENSIVE, PATIENT-CENTERED DENTAL CARE** •

the best way to get you back to work quickly after a procedure.

OraVerse® is a breakthrough that reverses unwanted lingering numbness after routine dental procedures where local anesthetic containing a vasoconstrictor was used. In clinical trials, the patients were able to regain normal sensation twice as fast vs. the control group.

OraVerse is indicated for the reversal of soft-tissue anesthesia, i.e., anesthesia of the lip and tongue, and the associated difficulty speaking and eating after a dental treatment.

OraVerse is not recommended for use in children less than 6 years of age. OraVerse is administered in the same way the local anesthetic was given so that you can return to normal sensation and function faster.

If you're in a rush after a dental visit, have an appointment, a lunch date, or anything where you can't be numb, ask Dr. Arfanis for more details about OraVerse.

Patient Testimonial

"I am amazed! Typically, I spend half the day after a numbing injection recovering from the effects of Novacaine, which at times was quite inconvenient and uncomfortable. With Oraverse, the numbing effect completely faded within 40 minutes after it was administered. This meant I was able to get on with my day without the traditional, slow recovery from the numbing medication. The quality of my daily life was improved with one, simple injection of Oraverse!" H.C.

**FREE
invisalign®
Consultation**
